📄 PROFILE

I am a passionate full stack developer with experience in Java, Spring Boot, Angular, and PHP (Laravel). I recently built a SaaS food delivery web application with JWT authentication and Stripe payments, managing restaurants, orders, and deliveries. I enjoy tackling challenging projects, learning continuously, and I am looking for an opportunity to apply and expand my skills. I am available for an interview at your convenience.

10/2025 – Present

Marrakech

Université Ibn Zohr, Bachelor's Degree

Bachelor's degree in Mechanics and Energy, Physics

09/2020 – 07/2023

Ait Melloul, maroc

🧠 SKILLS

Backend development with Spring Boot , Laravel (PHP) ,and JWT Token

Mastery of HTML, CSS, Bootstrap, and Ng-Zorro for modern and responsive design

Authentication and security with JWT Token

Frontend development with Angular and TypeScript, and JavaScript

Database management with MySQL

Design and management of complete, modern, and responsive e-commerce and SaaS food delivery applications

Integration of online payment systems (Stripe)

📁 PROJECTS

food delivery web application

This is a SaaS food delivery web app where I manage restaurants, menus, and delivery drivers.it allows me to monitor platform activity and view analytics , ready to handle real-world food delivery operations.

* Built with Laravel (PHP) and a modern frontend stack.

* It features secure JWT authentication

* Stripe payments.

E-Commerce Web Application (Online Shopping Platform)

Developed a modern and user-friendly e-commerce web application that allows users to browse products, create accounts, and make secure online purchases.

Implemented JWT-based authentication for secure login and integrated Stripe for safe and seamless payment processing.

Technologies:

* Backend: Spring Boot, MySQL (data and security management)

* Frontend: Angular, TypeScript, HTML, CSS, Ng-Zorro, Bootstrap

* Payment: Stripe integration for secure transactions

This project delivers a complete, intuitive, and responsive shopping experience with a focus on security and performance.

ToDoApp - Secure Task Management Web Application

ToDoApp is a secure web application designed for managing daily tasks efficiently. It allows users to create accounts, record, and organize their tasks through a responsive and user-friendly interface.

Developed using Spring Boot (backend), MySQL (database), and HTML, Thymeleaf, CSS, and Bootstrap (frontend).
